Visible Developer will generate 95% of the code in the business logic in the logical and physical layers of an application, as well as generating a complete user interface... that works!

"Visible Developer provides the ability for our development teams to quickly produce well architected .NET solutions. Our development time is greatly reduced as Visible Developer generates structured code well beyond the shell code produced by competitive products. Most importantly, we maintain the ability to elaborate the generated code to meet specific business needs."
